

The Islamia University of Bahawalpur

Recommendation Letter

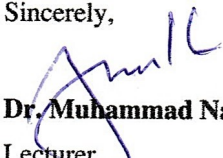

It is with great pleasure and confidence that I write this letter of recommendation for Mr. Hammad Riaz for admission to your Master's degree program. I had the privilege of teaching him during his BS Software Engineering program, where he was enrolled in my courses on Object-Oriented Programming (OOP) and SQL (Database Systems).

From the very beginning, Mr. Hammad distinguished himself as an exceptional student with strong analytical skills and a genuine passion for understanding complex concepts. In my Object-Oriented Programming class, he demonstrated not only problem-solving ability but also a deep understanding of the software design principles behind engineering systems. This strength was further reflected in his performance in advanced subjects related to Machine Learning and Deep Learning, where he consistently ranked among the top students.

Mr. Hammad's capabilities extend beyond academics into practical project work. His final year project, **"Intelli-Write: An AI-Powered Platform for Handwriting Analysis & Auto-Grading,"** which was recognized as the best project in his batch, is a strong example of his technical competence. The project required the integration of computer vision techniques and deep learning models, and he approached it with creativity, discipline, and a structured problem-solving mindset. His work on facial recognition systems further highlights his ability to apply theoretical knowledge to real-world software engineering problems.

In conclusion, Mr. Hammad Riaz is a highly motivated and talented individual with a strong foundation in Software Engineering and Computer Vision. His academic excellence, technical skills, and research potential make him an outstanding candidate for graduate studies. I strongly recommend him without reservation for further studies or employment in the field of Software Engineering.

Sincerely,

Dr. Muhammad Nauman

Lecturer
